Summary

Dedicated and detail-oriented Information Technology undergraduate with a strong academic foundation and a passion for software development and innovation. Adept at problem-solving, analytical thinking, and collaborating in team environments. Eager to contribute to organizational success while continuously learning and embracing new technologies.

Education

ADITHYA INSTITUTE OF TECHNOLOGY

SEP.2023 – MAY2027

Bachelor of Information Technology (B.tech)

Coimbatore, Tamilnadu

INTERNSHIP

Cognifyz Technologies

Feb 2026 – Mar 2026

Full Stack Development Intern

Remote

- Developed responsive full-stack web applications by implementing front-end interfaces and back-end functionalities.
- Applied software engineering principles to build maintainable, scalable, and user-centric applications.
- Collaborated in an Agile development environment, participating in debugging, testing, and feature implementation.
- Enhanced technical proficiency in full-stack development, problem-solving, and industry-standard development workflows.

Projects

Student Placement Management System | *Python (Flask), HTML, CSS, SQL, VS Code*

2026

- Built a full-stack web application to automate student placement activities, reducing manual management of recruitment data.
- Developed secure authentication for students and administrators with profile, company, and job management modules.
- Implemented job application tracking, search and filtering, and database integration using SQL for efficient data management.
- Created an interactive placement dashboard to monitor applications, recruitment progress, and placement statistics.

Blood Donor Finder | *Python (Flask), HTML, CSS, SQL, VS Code*

2026

- Developed a web-based Blood Donor Finder application to connect blood donors with patients during emergency situations.
- Implemented secure donor registration and authentication with blood group, location, and contact information management.
- Built an advanced search feature to quickly find eligible donors based on blood group and availability.
- Designed a hospital dashboard with blood request notifications and donation history tracking using an SQL database.

Lumiable – AI-Powered Accessibility & Safety Platform | *Python, TensorFlow Lite, Google Maps API, ML Kit* **2025**

- Developed an AI-powered mobile application to assist visually impaired users with safe navigation and emergency support.
- Built the SeeSphere module for real-time object detection with voice-based environmental feedback.
- Integrated SOS alerts, live location tracking, and multilingual voice assistance to enhance user safety and accessibility.

Technical Skills

Programming: Python, SQL

Frontend: HTML5, CSS3, react.js

Backend: python Flask (basic)

Databases: MySQL, SQLite

Tools: Git, GitHub, Visual Studio Code

Achievements

- Finalist in the National Level AWS Hackathon held in Hyderabad.
- Finalist in the Larsen & Toubro Hackathon held in Chennai.
- Won top prizes in multiple Paper Presentation and Technical Seminar competitions.
